

std::vector< uint >

ns_geo::Geometry

ns_geo::RefPolygon
< _Ty >

```
graph BT; A[ns_geo::RefPolygon<_Ty>] -- blue arrow --> B[std::vector<uint>]; A -- green arrow --> C[ns_geo::Geometry];
```

The diagram illustrates a relationship between three C++ types. At the bottom is a grey box labeled 'ns_geo::RefPolygon < _Ty >'. Two arrows originate from this box: a blue arrow points to a white box labeled 'std::vector< uint >' at the top left, and a green arrow points to a white box labeled 'ns_geo::Geometry' at the top right.
